

KAUSHIK BALKRISHNA PAYKOLI

+91-9324451660 | paykolikaushikb@gmail.com
github.com/kaushik0010 | linkedin.com/in/kaushik010/

Summary:

Full Stack Software Engineer with experience building scalable web applications using React.js, Next.js, Node.js, and MongoDB. Strong foundation in data structures, REST API design, authentication systems, and backend architecture. Experienced in designing schema-driven systems with validation, role-based access control (RBAC), and structured workflows. Passionate about building reliable, maintainable, and production-ready systems. Practicing system design fundamentals including caching, database scaling, and API rate limiting.

Education

Mumbai University	Oct 2022-Jul 2025
B.E. in Computer Science & Engineering (IoT and CSBT)	CGPA: 7.2/10

Skills

Languages: JavaScript, TypeScript, Java, SQL

Frontend: ReactJS, Next.js (App router), Tailwind CSS

Backend: Node.js, Express.js, REST APIs, JWT Authentication, RBAC

Database: MongoDB (Schema Design, Indexing), SQL

Concepts: Data Structures & Algorithms, OOP, System Design Basics, API Design

Tools: Git, GitHub, Linux

Projects Experience

KOSH — Digitized Savings Platform (Product-Led System)	Jul 2025
---	----------

Tech: Next.js, MongoDB, NextAuth, TailwindCSS

- Designed and implemented a full-stack savings platform supporting individual and group campaigns with rule-based contribution tracking.
- Built REST APIs with authentication and role-based access control (RBAC) for secure group governance.
- Modeled MongoDB schemas with compound indexing for optimized contribution queries.
- Implemented time-bound contribution windows with late penalty logic and validation using Zod.
- Designed idempotent contribution APIs to prevent duplicate payments.
- Built dashboards to visualize savings progress, campaign status, and contribution history.
- GitHub: <https://github.com/kaushik0010/KOSH>

SOC-AI – Instant Security Triage and Autonomous Platform	Dec 2025
---	----------

Tech: Next.js 15, MongoDB, Groq, Kestra, Zod

- Built a full-stack log triage system using LLMs with structured outputs for security event classification.
- Designed backend schemas to track security events, AI feedback loops, and remediation workflows.
- Implemented Human-in-the-Loop (HITL) review workflows for auditability.
- Applied strict input validation and rate limiting for safe AI interaction.
- GitHub: <https://github.com/kaushik0010/soc-ai>

MoodMantra – Mindful AI Companion	Jan 2026
--	----------

Tech: Next.js, TypeScript, Gemini Native Audio API

- Architected **Mood-Mantra**, a voice-first empathetic AI companion designed for non-judgmental conversational support.
- Optimized application performance by engineering a custom React state architecture to monitor continuous high-frequency audio thresholds, eliminating memory leaks and preventing unnecessary UI re-renders during live WebSocket sessions.
- Launched a functional MVP to a private community to validate the core problem, successfully onboarding 10 registered users and utilizing their unprompted conversational interactions to rapidly iterate on the model's system instructions.
- GitHub: <https://github.com/kaushik0010/mood-mantra-v2>

Achievements

- HackerRank SQL Advanced Certified <https://www.hackerrank.com/certificates/iframe/d799414a43c6>
- AWS Cloud Practitioner Essentials Completion Certificate
